

BioCell™

Biodegradable Bubble Film

“Superior all round protection for your products and the environment”

BioCell™ is a new generation of biodegradable bubble film offering high levels of shock and impact protection for your products.

It is lightweight, moisture resistant and nonscratching; and is an environmentally positive alternative to conventional plastic bubble film.

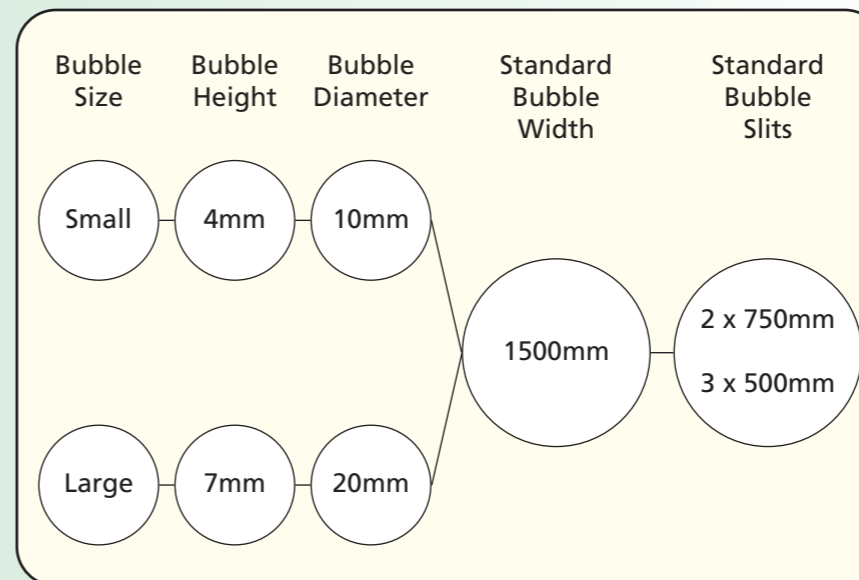

- High level protection
- Biodegradable, reusable and recyclable
- Reduces plastic pollution
- Wide range of sizes
- Cost effective

“82% of UK consumers prefer to purchase goods and services from companies that are socially and environmentally responsible.”

Social Market Foundation

“It’s not just money you’re saving”

Frequently Asked Questions

Does BioCell™ perform as well as traditional bubble wrap?

Yes. There is no loss of product integrity - the performance of BioCell™ is identical to normal bubble.

BioCell™ is biodegradable. What difference does that make?

BioCell™ reduces plastic pollution and the volume of plastic going into landfill. When disposed of, BioCell™ will biodegrade within 12 to 24 months leaving no toxic residues. Conventional plastics will remain in the environment for decades, often as litter or filling up ever decreasing landfill reserves.

How does it biodegrade?

The bubble uses special additives that start to degrade the material without impacting the integrity of the film. Once disposed of, the film will undergo oxidative degradation. The molecular structure of the film is altered enabling the material to totally degrade in the presence of moisture, micro-organisms and oxygen.

How can BioCell™ be disposed of?

BioCell™ can be recycled in the existing waste stream for low density polyethylene. It can also be recycled in home or commercial composting facilities.

Are BioCell™ bubble bags available?

Yes. BioCell™ bags can be made according to your specification.

BioCell™ AS

Anti Static Biodegradable

Electrostatic Discharge (ESD) can damage sensitive electronic components resulting in failures, reduced reliability and increased reworking costs.

BioCell™ AS is fully compliant with EN61340-5-1 and provides static protection and cushioning for companies looking to protect these high value products AND the environment.
